

EMERGENCY MANAGEMENT NORFOLK ISLAND

MEDIA RELEASE

10.30am January 21, 2026

WEATHER UPDATE: TROPICAL LOW 14U (Tropical Low 14U Update No. 2)

The Bureau of Meteorology (BOM) still has a Severe Weather Warning issued for Norfolk Island for heavy rainfall, but still does not expect Tropical Low 14U to develop into a cyclone.

Emergency Management Norfolk Island continues to monitor the situation.

Storms, heavy rain and strong winds are possible on Norfolk Island today from a deep low pressure trough. Very windy conditions will continue today as Tropical Low (14U) passes the island. We should see improved conditions later today.

Please refer to www.bom.gov.au for detailed and updated weather information.
