- Analysis will be conducted by ALS Environmental, Brisbane, NATA accreditation no. 825, Site No. 818 (Micro site no. 18958).
- **Breaches in recommended extraction / analysis holding times (if any) are displayed overleaf in the Proactive Holding Time Report table.**
- **Samples "FS01", "FS02", "FS03", and "FS04" have been forwarded to Eurofins, as requested. Please note that this will incur a freight forwarding fee.**
- Please be aware that APHA/NEPM recommends water and soil samples be chilled to less than or equal to 6°C for chemical analysis, and less than or equal to 10°C but unfrozen for Microbiological analysis. Where samples are received above this temperature, it should be taken into consideration when interpreting results. Refer to ALS EnviroMail 85 for ALS recommendations of the best practice for chilling samples after sampling and for maintaining a cool temperature during transit.

Sample Container(s)/Preservation Non-Compliances

All comparisons are made against pretreatment/preservation AS, APHA, USEPA standards.

- **No sample container / preservation non-compliance exists.**

Summary of Sample(s) and Requested Analysis

Some items described below may be part of a laboratory process necessary for the execution of client requested tasks. Packages may contain additional analyses, such as the determination of moisture content and preparation tasks, that are included in the package.
If no sampling time is provided, the sampling time will default 00:00 on the date of sampling. If no sampling date is provided, the sampling date will be assumed by the laboratory and displayed in brackets without a time component

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis.

Where the LOR of a reported result differs from standard LOR, this may be due to high moisture content, insufficient sample (reduced weight employed) or matrix interference.

When sampling time information is not provided by the client, sampling dates are shown without a time component. In these instances, the time component has been assumed by the laboratory for processing purposes.

Where a result is required to meet compliance limits the associated uncertainty must be considered. Refer to the ALS Contact for details.

Key : CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
^ = This result is computed from individual analyte detections at or above the level of reporting
ø = ALS is not NATA accredited for these tests.
~ = Indicates an estimated value.

- EP075 (SIM): Where reported, Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero.
- Benzo(a)pyrene Toxicity Equivalent Quotient (TEQ) per the NEPM (2013) is the sum total of the concentration of the eight carcinogenic PAHs multiplied by their Toxicity Equivalence Factor (TEF) relative to Benzo(a)pyrene. TEF values are provided in brackets as follows: Benz(a)anthracene (0.1), Chrysene (0.01), Benzo(b+j) & Benzo(k)fluoranthene (0.1), Benzo(a)pyrene (1.0), Indeno(1.2.3.cd)pyrene (0.1), Dibenz(a.h)anthracene (1.0), Benzo(g.h.i)perylene (0.01). Less than LOR results for 'TEQ Zero' are treated as zero, for 'TEQ 1/2LOR' are treated as half the reported LOR, and for 'TEQ LOR' are treated as being equal to the reported LOR. Note: TEQ 1/2LOR and TEQ LOR will calculate as 0.6mg/Kg and 1.2mg/Kg respectively for samples with non-detects for all of the eight TEQ PAHs.
- EP231X - Per- and Polyfluoroalkyl Substances (PFAS): Samples received in 20ml or 125ml bottles have been tested in accordance with the QSM5.3 compliant, NATA accredited method. 60mL or 250mL bottles have been tested to the legacy QSM 5.1 aligned, NATA accredited method.
- EP080: Where reported, Total Xylenes is the sum of the reported concentrations of m&p-Xylene and o-Xylene at or above the LOR.
- EP068: Where reported, Total Chlordane (sum) is the sum of the reported concentrations of cis-Chlordane and trans-Chlordane at or above the LOR.
- EP068: Where reported, Total OCP is the sum of the reported concentrations of all Organochlorine Pesticides at or above LOR.
- EP074: Where reported, Total Trihalomethanes is the sum of the reported concentrations of all Trihalomethanes at or above the LOR.

- EA200 'Am' Amosite (brown asbestos)
- EA200 'Cr' Crocidolite (blue asbestos)
- EA200 'Trace' - Asbestos fibres ("Free Fibres") detected by trace analysis per AS4964. The result can be interpreted that the sample contains detectable 'respirable' asbestos fibres

- EA200: Asbestos Identification Samples were analysed by Polarised Light Microscopy including dispersion staining.
- EA200 Legend
- EA200 'Ch' Chrysotile (white asbestos)
- EA200: 'UMF' Unknown Mineral Fibres. "-" indicates fibres detected may or may not be asbestos fibres. Confirmation by alternative techniques is recommended.
- EA200: For samples larger than 30g, the <2mm fraction may be sub-sampled prior to trace analysis as outlined in ISO23909:2008(E) Sect 6.3.2-2
- EA200: 'Yes' - Asbestos detected by polarised light microscopy including dispersion staining.
- EA200: 'No*' - No asbestos found, at the reporting limit of 0.1g/kg, by polarised light microscopy including dispersion staining. Asbestos material was detected and positively identified at concentrations estimated to be below 0.1g/kg.
- EA200: 'No' - No asbestos found at the reporting limit 0.1g/kg, by polarised light microscopy including dispersion staining.
- EP231: Stable isotope enriched internal standards are added to samples prior to extraction. Target compounds have a direct analogous internal standard with the exception of PFPeS, PFHpA, PFDS, PFTrDA and 10:2 FTS. These compounds use an internal standard that is chemically related and has a retention time close to that of the target compound. The DQO for internal standard response is 50-150% of that established at initial calibration. PFOS is quantified using a certified, traceable standard consisting of linear and branched PFOS isomers. These practices are in line with recommendations in the National Environmental Management Plan for PFAS (Australian HEPA) and also conform to QSM 5.3 (US DoD) requirements.

General Comments

The analytical procedures used by ALS have been developed from established internationally recognised procedures such as those published by the USEPA, APHA, AS and NEPM. In house developed procedures are fully validated and are often at the client request.

Where moisture determination has been performed, results are reported on a dry weight basis.

Where a reported less than (<) result is higher than the LOR, this may be due to primary sample extract/digestate dilution and/or insufficient sample for analysis. Where the LOR of a reported result differs from standard LOR, this may be due to high

Key : Anonymous = Refers to samples which are not specifically part of this work order but formed part of the QC process lot
CAS Number = CAS registry number from database maintained by Chemical Abstracts Services. The Chemical Abstracts Service is a division of the American Chemical Society.
LOR = Limit of reporting
RPD = Relative Percentage Difference
# = Indicates failed QC

Laboratory Duplicate (DUP) Report

The quality control term Laboratory Duplicate refers to a randomly selected intralaboratory split. Laboratory duplicates provide information regarding method precision and sample heterogeneity. The permitted ranges for the Relative Percent Deviation (RPD) of Laboratory Duplicates are specified in ALS Method QWI-EN/38 and are dependent on the magnitude of results in comparison to the level of reporting: Result < 10 times LOR: No Limit; Result between 10 and 20 times LOR: 0% - 50%; Result > 20 times LOR: 0% - 20%.

Appendix J – Quality assurance and quality control

Field QA/QC program

QA/QC sampling

Field QA/QC samples were collected with reference to AS 4482.1: 2005 and NEPM 2013 Schedule B (3) requirements and included the analyses of the following types of samples in Table J1.

The primary laboratory used as part of the investigation was ALS Environmental (ALS) with Eurofins assuming the role of the secondary laboratory for analysis of the inter-laboratory duplicate samples.

Table J1 Field QA/QC sample details

Field QA/QC sample type	Details
Intra-Laboratory Duplicate (Blind)	Comprise a single sample that is divided into two separate sampling containers. Both samples are sent anonymously to the primary project laboratory. Blind duplicates provide an indication of the analytical precision of the laboratory, but are inherently influenced by other factors such as sampling techniques and sample media heterogeneity.
Inter-Laboratory Duplicate (Split)	Inter-Laboratory Duplicate (Split) samples are two separate samples collected at the same location and analysed by two separate laboratories to determine the analytical proficiency of the primary laboratory.
Rinsate blank	A rinsate blank is a sample of analyte free water poured over or through decontaminated field sampling equipment prior to the collection of environmental samples. This sample is taken to assess the adequacy of the decontamination process.
Transport blank	A transport blank is a sample of analyte free water which is stored with field samples during transportation to the laboratory. This sample is taken to assess potential cross contamination which may have occurred during transportation.

GHD adopts the AS4482.1 acceptance criteria of 30% and 50% RPD for field duplicates of inorganics and organics, respectively. Blind duplicate samples should have RPDs less than the criteria in each instance. The laboratory RPDs have been assessed using the following ranges:

- Results <10 times LOR: no limits.
- Results between 10 and 30 times LOR 0% - 50%.
- Results >30 times LOR: 0-20% However, it is noted that the criteria will not always be achieved, particularly in heterogeneous materials, or at low analyte concentrations.

In the instance where samples and their corresponding duplicates have concentrations of target analytes less than the laboratory LOR, no quantitative comparison can be carried out and therefore the RPD is undefined. This is also the case for situations where the sample result is less than ten times the laboratory LOR.

Sampling handling and preservation

Soil samples were collected from the solid flight auger, hand auger and the excavator bucket were transferred directly to the laboratory supplied sample jars. Soil jars were filled to full to reduce headspace in the sample containers.

Samples were placed immediately into an insulated cooler box with ice while on site and stored on ice while in transit to the laboratory. All samples were transported under a completed chain of custody and under an ALS Australian Quarantine and Inspection Service (AQIS) permit.

The security seal of the cooler boxes used to transport the samples to the laboratory were received intact as per the Sample Receipt Notification (documented within the laboratory reports in Appendix I).

Chain of custody

Unique Chain of Custody documentation and distinct batch numbers accompany all sample batches. This documentation is included in Appendix I.

Sample analysis and extraction holding times

All samples were analysed and extracted within holding times with the exception of those outlined in Table J2.

Field QA/QC results

The field QC results discussion below considers all soil samples collected as part of this investigation.

Sample target frequency

A summary of the frequency rate for QA samples collected and analysed have been provided in Table J6 and J7.

Table J6 Soil QA/QC target frequency rates

Number of samples collected	Number of samples analysed	Number of QA/QC samples	Target frequency collection	Target frequency analysis
74	43	4	5.40%	9.30%

Table J7 Soil QA/QC target frequency rates for analytes

Analysis	No of primary samples analysed	No of QA/QC samples analysed	Frequency analysis
Heavy metals	43	2	4.65 %
Lead	45	2	4.44 %
Speciated chromium	16	n/a	n/a
BTEXN, TRH	23	1	4.34 %
PAH	19	1	5.26 %
OP / OPPs, PCBs	16	1	6.25 %
Asbestos (presence / absence)	19	n/a	n/a
PFAS	21	2	9.52 %
VOC	4	0	0
Nutrients	4	0	0

The total number of samples collected and analysed for the field program were within the target frequency. Minor exceedances of the frequency of samples analysed for particular analytes were recorded for some analytes and were generally associated with scheduling additional analysis for delineation following receipt of initial results.

Soil sample RPD

Relative percentage differences (RPD's) for soil samples were calculated between the primary and duplicate results. All samples were within the acceptable data quality limits, except for the RPD results summarised in Table J8.

The soil RPDs are provided in Appendix K.

Table J8 Soil QA/QC target frequency rates for analytes

Primary & QA Pair	Analyte	Primary (mg/kg)	QA/QC (mg/kg)	RPD (%)
BH09_0.0_0.2 & FS02	Chromium (III + VI)	161	360	76
HA01_0.0_0.2 & FS03	Chromium (III + VI)	160	400	86

RPD exceedances for chromium were reported in two samples, however the exceedances was found between the primary and secondary laboratory. These RPD exceedances were identified in samples collected from fill material (gravely clay) and are likely associated with:

- The heterogeneous nature of the fill material.
- The laboratory method/procedures and/or incomplete mixing of the sample prior to analysis at the secondary laboratory where FS02 and FS03 where analysed.

Given that none of the chromium samples that were speciated for chromium exceeded human health criteria these RPD exceedances are not considered to affect the overall interpretation of the results for the purposes of this assessment.

Rinsate blanks

The results are summarised in Table J9 and are presented in Appendix K

Laboratory QA/QC program,

The laboratory subcontracted by GHD to analyse samples (ALS) is certified by the NATA for the required analysis. NATA certification provides for laboratory QA procedures to be in place and to be carried out on an on-going basis.

As part of the NATA requirements, ALS carried out and reported analysis of laboratory quality control samples, such as:

- Duplicate samples (the same sample analysed more than once)
- Blanks (containing none of the analytes to be analysed)
- Spiked samples (containing known additions of the analytes to appropriate matrices)
- Standard samples (samples containing known concentrations of the analytes - also known as reference standards).

Laboratory QA/QC procedures

As part of NATA requirements, the laboratory incorporated a range of QA methods to ensure accuracy of data. This includes the analyses of internal laboratory QC samples, details of which have been provided in Table J11.

Table J11 Laboratory QC sample details

Laboratory QA/QC sample	Details
Laboratory (Method) Blank	Usually an organic or aqueous solution that is as free as possible of analytes of interest to which is added all the reagents, in the same volume, as used in the preparation and subsequent analysis of the samples. The reagent blank is carried through the complete sample preparation procedure and contains the same reagent concentrations in the final solution as in the sample solution used for analysis. The reagent blank is used to correct for possible contamination resulting from the preparation or processing of the sample.
Laboratory Control Sample	A reference standard of known concentration is analysed along with a batch of samples. The Laboratory Control Sample provides an indication of the analytical accuracy and the precision of the test method and is used for inorganic analyses.
Laboratory Spike	An authentic field sample is 'spiked' by adding an aliquot of known concentration of the target analyte(s) prior to sample extraction and analysis. A spike documents the effect of the sample matrix on the extraction and analytical techniques. Spiked samples will be analysed for each batch where samples are analysed for organic chemicals of concern.
Surrogate Samples	These are organic compounds which are similar to the analyte of interest in terms of chemical composition, extractability, and chromatographic conditions (retention time), but which are not normally found in environmental samples. These surrogate compounds are 'spiked' into blanks, standards and samples submitted for organic analyses by gas-chromatographic techniques prior to sample extraction. Surrogate

Laboratory QA/QC sample	Details
	Standard / Spikes provide a means of checking that no gross errors have occurred during any stage of the test method leading to significant analyte loss.
Laboratory Duplicates	The analytical laboratory collects duplicate sub samples from one sample submitted for analytical testing at a rate equivalent to one in twenty samples per analytical batch, or one sample per batch if less than twenty samples are analysed in a batch. A laboratory duplicate provides data on the analytical precision and reproducibility of the test result. The precision of analysis performed by the laboratory is determined by the calculation of the relative percent difference (RPD). The RPD is calculated based on a comparison of an intra-laboratory split of the sample material with results representing the percent difference between the two sample concentrations for a specific contaminant. The RPD is calculated using the following formula: $$RPD(\%) = \frac{|C_o - C_d|}{C_o + C_d} \times 200$$ Where Co = Analyte concentration of the original sample Cd = Analyte concentration of the duplicate sample

The laboratory is required to provide this information to GHD. The individual analytical laboratories conduct an assessment of the laboratory QC program internally; however, the results are also reviewed and assessed by GHD.

Laboratory QA/QC results

The NATA certified laboratory's utilised for this assessment undertook their own internal quality assurance and quality control procedures for sample analysis. GHD has reviewed the internal laboratory control data provided with the laboratory reports, which are provided in Appendix I. Exceedances of internal laboratory QA/QC are summarised in Table J12.

Asbestos Notes
Asbestos (Trace) : Asbestos fibres ("Free Fibres") detected by trace analysis per AS4964. The result can be interpreted that the sample contains detectable 'respirable' asbestos fibres
No: No asbestos found, at the reporting limit of 0.1g/kg, by polarised light microscopy including dispersion staining.
Yes*: Asbestos detected by polarised light microscopy including dispersion staining.
Yes#: Friability is assessed by crushing using finger pressure as defined under WorkSafe Australia regulations

Other Notes
NL: indicates concentration is not limiting

Asbestos Notes
Asbestos (Trace) : Asbestos fibres ("Free Fibres") detected by trace analysis per AS4964. The result can be interpreted
No: No asbestos found, at the reporting limit of 0.1g/kg, by polarised light microscopy including dispersion staining.
Yes*: Asbestos detected by polarised light microscopy including dispersion staining.
Yes#: Friability is assessed by crushing using finger pressure as defined under WorkSafe Australia regulations

Other Notes
NL: indicates concentration is not limiting

Asbestos Notes
Asbestos (Trace) : Asbestos fibres ("Free Fibres") detected by trace analysis per AS4964. The result can be interpreted
No: No asbestos found, at the reporting limit of 0.1g/kg, by polarised light microscopy including dispersion staining.
Yes*: Asbestos detected by polarised light microscopy including dispersion staining.
Yes#: Friability is assessed by crushing using finger pressure as defined under WorkSafe Australia regulations

Other Notes
NL: indicates concentration is not limiting

Asbestos Notes
Asbestos (Trace) : Asbestos fibres ("Free Fibres") detected by trace analysis per AS4964. The result can be interpreted
No: No asbestos found, at the reporting limit of 0.1g/kg, by polarised light microscopy including dispersion staining.
Yes*: Asbestos detected by polarised light microscopy including dispersion staining.
Yes#: Friability is assessed by crushing using finger pressure as defined under WorkSafe Australia regulations

Other Notes
NL: indicates concentration is not limiting

Asbestos Notes
Asbestos (Trace) : Asbestos fibres ("Free Fibres") detected by trace analysis per AS4964. The result can be interpreted
No: No asbestos found, at the reporting limit of 0.1g/kg, by polarised light microscopy including dispersion staining.
Yes*: Asbestos detected by polarised light microscopy including dispersion staining.

Asbestos Notes

Asbestos (Trace) : Asbestos fibres ("Free Fibres") detected by trace analysis per AS4964. The result can be interpreted that the sample contains detectable 'respirable' asbestos fibres

No: No asbestos found, at the reporting limit of 0.1g/kg, by polarised light microscopy including dispersion staining.

Yes*: Asbestos detected by polarised light microscopy including dispersion staining.

Yes#: Friability is assessed by crushing using finger pressure as defined under WorkSafe Australia regulations

Other Notes

NL: indicates concentration is not limiting

*RPDs have only been considered where a concentration is greater than 1 times the EQL.
**High RPDs are in bold (Acceptable RPDs for each EQL multiplier range are: 200 (1-10 x EQL); 50 (10-30 x EQL); 50 (> 30 x EQL))
***Interlab Duplicates are matched on a per compound basis as methods vary between laboratories. Any methods in the row header relate to those used in the primary laboratory
